points

1.

Which of these methods are used by organizers to prevent overfitting to the test set using scores from the leaderboard?

☑ Splitting test for public/private

Correct

The submissions are scored on public part of the test set while private score is only revealed when competition ends, thus it is not possible to overfit to private part

☐ Shuffling order of rows in train and test sets

Un-selected is correct

☑ Adding non-relevant samples to test set

Correct

Non-relevant samples make it much harder to do "leaderboard probing", i.e. get labels of individual objects based on leaderboard score

☐ Limiting number of submissions per day

This should be selected

2.

What are the main reasons for participating in data science competitions? Check all that apply.

☑ To have an opportunity for networking with other participants

Correct
Yes, the people on forums are very active and helpful.

☑ To easily earn a lot of money

This should not be selected
Believe us, it is not easy. And, of course, the bigger the prizes, the harder to win.

☑ To learn basics of data science

Correct
Yes! For example there are plenty of public datasets on kaggle.com with a huge community of people who is also learning.

☐ To learn things about deployment/testing

Un-selected is correct

✔ 　　1 / 1
points

3.

Imagine that you are participating in an image recognition competition and you want to use some publicly available set of images. Are you allowed to do this?

○ Yes, of course

○ No, this is not the data provided by the organizers

You need to check the competition rules

Practice Quiz

Correct

Practice Quiz, 4 questions If you have any doubt about competition mechanics and limitations -
- check the rules or ask organizers on forums
